### **DETAILED ACTION**

The Art Unit location of your application in the USPTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 1648.

#### ***Election/Restriction***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, 8-10, 18, 19, 20, drawn to composition comprising intact cells expressing an antigen wherein the antigen is Class I antigens, classified in class 424, subclass 153.1.
- II. Claims 1-4, 6, 8-10, 18, 19, 20, drawn to composition comprising intact cells expressing an antigen wherein the antigen is Class II antigens, classified in class 435, subclass 343.1.
- III. Claims 1, 7, 8-10, 18, 19, 20, drawn to composition comprising intact cells expressing an antigen wherein the antigens are both Class I and Class II antigens or other alloantigens, classified in class 536, subclass 23.1.
- IV. Claims 1, 11, 12, 14, 15, 18-20, drawn to composition comprising intact cells expressing an antigen wherein the antigen is Class I antigens and another antigen from herpes virus, classified in class 424, subclass 229.1.

Art Unit: 1648

- V. Claims 1, 11, 13-15, 18-20, drawn to composition comprising intact cells expressing an antigen wherein the antigen is Class I antigens and another antigen from retrovirus, classified in class 424, subclass 207.1.
- VI. Claims, 1, 16-20, drawn to composition comprising intact cells expressing an antigen wherein the antigen is Class I antigens and costimulatory molecule, classified in class 530, subclass 300.
- VII. Claims 21-24, drawn to a method of generating immune response, classified in class 435, subclass 6.
- VIII. Claims 25-28, drawn to a method of eliciting immune response against envelope virus, classified in class 424, subclass 208.1.
- IX. Claim 29, drawn to composition comprising intact non malignant cells, classified in class 435, subclass 372.
- X. Claims 1, 30, 31, drawn to composition comprising intact cells expressing an antigen wherein the antigen is Class I antigens further comprising one major or minor allotypic antigen, classified in class 435, subclass 325.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I-VI, IX, X and VII, VIII are related as product and process of use.

The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different

Art Unit: 1648

product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the composition of Group I for instance can be utilized in a method of expanding the particular cells ex vivo i.e priming method.

Inventions of Groups I-VI, IX, X are mutually exclusive and patentably distinct products each are structurally and functionally different products which are made by different methods and have different uses. The examination of all groups would require different searches in the U.S. Patent Shoes and scientific literature and would require the consideration of different patentability issues.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
